

JOSE CRUZ

Junior Full-Stack Developer

Forest Park, IL | (773) 543-5250 | jcruz6003@gmail.com | [Portfolio](#) | github.com/josecruz-talavera

PROFESSIONAL SUMMARY

Self-taught full-stack developer with hands-on experience designing, building, and deploying production web applications using Python, Flask, JavaScript, and AWS. Combines a strong technical foundation with proven leadership, training, and communication skills from supervisory roles in healthcare. Seeking a junior full-stack engineering position to apply project experience and continue growing professionally.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML, CSS

Frameworks: Flask, Django

Databases: SQLite, MySQL, SQLAlchemy

Cloud & Tools: AWS (EC2, S3, Route 53), Render, Git, Docker, Nginx

PROJECTS

HealthcareProviderSearch — *Python, Flask, SQLAlchemy, JavaScript, HTML/CSS, AWS (EC2, S3, Route 53)*

Full-stack directory web application for searching healthcare providers.

- Built a searchable doctor directory supporting queries by name, specialty, or location.
- Designed a clean, intuitive interface to display provider details and contact information.
- Deployed on AWS using EC2, S3, and Route 53 for reliable hosting and DNS management.

Brisblogs.com — *Python, Flask, SQLAlchemy, JavaScript, HTML/CSS, AWS (EC2, S3, Route 53)*

Travel blog featuring last-minute flight destinations from around the world.

- Curated content for multiple global destinations, each with descriptions and image galleries.
- Implemented responsive design, image gallery, contact form, and intuitive navigation.
- Live site: brisblogs.com

TalaveraFitness — *Python, Flask, SQLAlchemy, JavaScript, HTML/CSS, AWS (EC2, S3, Route 53)*

Personalized daily workout app with user authentication and video instruction.

- Generates customized workout routines based on user preferences captured at signup.
- Implemented user authentication so users can resume training sessions where they left off.
- Embedded instructional videos for every exercise to reinforce proper form and technique.

BMI Calculator — *Python, Flask, HTML/CSS, Render*

Responsive Flask web app that calculates Body Mass Index and returns the user's weight category.

- Accepts weight in pounds and height in feet/inches, computes BMI, and classifies the result as underweight, normal, overweight, or obese.
- Implemented input validation and error handling to gracefully manage invalid or missing data.
- Designed a clean, mobile-friendly UI and deployed as a live service on Render.
- Live site: bmi-calculator-h5ou.onrender.com

PROFESSIONAL EXPERIENCE

Senior Scheduling Team Lead Jul 2025 – Present

Midwest Orthopedics at Rush | Chicago, IL

- Serve as the primary resource for scheduling team members, providing real-time guidance on complex cases.
- Coach team through performance feedback, recognizing strong work and identifying areas for improvement.
